# What does KeySafe™ do?

KeySafe is an efficient and secure way to keep spare keys safe in the place you need them most. If you've ever locked yourself out or had to hurry across town to let someone into your home or business, KeySafe could have saved you a lot of trouble. The KeySafe range comprises different models which all have one thing in common. They offer you a convenient, secure place to store your keys. There are smaller models suitable for homes or small businesses with just one key, and larger models which can hold larger sets of keys or even other contents (messages, access cards, etc.). The Over-the-Door and Portable models are particularly well-suited to applications like building sites, where certain areas require keys to be held temporarily.

## KeySafe P500

The KeySafe P500 provides a secure way to store keys for convenient, on-site access. It solves the need for easy, reliable access to homes, businesses, equipment, storage buildings, or any other asset that requires a key. The P500 is a secure mechanical KeySafe that includes many features that resist physical attacks. For even more security, an alarm sensor is available for connection to an alarm system. The KeySafe P500 comes with a full integrated weather cover, protecting it from ice, snow, water and dust.

## KeySafe Pro Permanent Strongbox

Easy to use and easy to program, the KeySafe Pro Permanent Strongbox can hold up to five keys. It's an excellent solution for providing convenient key storage for many different applications such as unattended servicing or deliveries, home healthcare entry, construction sites and remote sites. Protective cover available.

## KeySafe Pro Permanent Slimline

The KeySafe Pro Slimline can hold up to two keys and is ideal for residential or small business applications. It's easy to use and program, so children returning home can use it. It's also suitable for other applications such as unattended servicing or deliveries, home healthcare entry, holiday homes or other remote sites. Its rounded corners make it a popular design with private buyers.

## KeySafe Pro Big Box

For applications such as construction sites, unattended deliveries or remote sites where large sets of keys need to be stored, the KeySafe Pro Big Box is easy to use and program and includes a protective cover. Its size means that it can hold other contents like messages or access cards, and makes it ideal for older, irregular shaped keys.

## KeySafe Pro Over-the-Door-Mount

This model can be mounted on a door or doorframe and holds up to five keys. It's an ideal model for use on construction sites, in offices and on remote sites. It's easy to program and to use, with up to 1024 possible combinations like all KeySafe Pro models.

## KeySafe Pro Portable

This model can be used for temporary storage for up to three keys on fences, gates, railings and doorknobs, or it can be used as a padlock. No tools are required to mount it and it's easy to use and program. It's ideal for applications like construction sites, holiday homes and other temporary sites.

## KeySafe Accessories

All KeySafe Pro wall-mount and portable models have an optional protective cover. The covers are made of heavy duty rubber which protects the KeySafe against water and dust, as well as prying eyes.

# How long does a KeySafe last?

In the United States, the KeySafe has been the top-selling outside key storage unit for over 20 years. The KeySafe is made of tough die-cast zinc with water and rust-resistant push buttons. The KeySafe can be used in temperatures ranging from -32°C to 68°C. To give the KeySafe even more protection against the elements and, most importantly, to keep it out of sight of prying eyes, you can get sturdy rubber covers for most models to keep out rain and dust.

# How does KeySafe work?

KeySafe is a tough metal key storage box with Supra's patented TouchPoint™ locking mechanism that can be fixed securely to a wall, or temporarily locked onto a door or fence. The TouchPoint™ mechanism has ten push buttons that allow you to enter a code of your choice in any one of 1024 combinations. It's simple enough for children to use and all KeySafe models have straightforward mechanical operation. It's easy to set or change codes whenever you wish using the code setting card in the KeySafe.

# Is KeySafe suitable for my home or business?

All KeySafe models are compact and unobtrusive, making them ideal key safes for small business and private homes. They come in a range of colours to match or complement your premises and are easy to install as they require no external power sources or connections. Their simple operation, even in the dark, means that even unskilled users can use them successfully.

## KeySafe Packaging

All KeySafe models can be ordered in a range of different colours.  
Ask your supplier which colours are available.

Most KeySafe models are available in shelf packs with blister packs for display,  
and in reshipper packs in cardboard cartons for easy storage and shipping.
